# Daily Field Report 1 - UT Re-measurement - 6-RA-103-11

## Scope and Responsibilities

The scope of work involves a UT thickness survey on the rich amine header 6-RA-103 located within the ATU-100. Sarah Thompson, acting as the UT technician, is responsible for the execution of the measurements and data recording in accordance with the site requirements.

All activities were performed under the guidelines of QSCP-NDT-001 Rev 4. The technician ensured that all measurements adhered to the specified thickness survey requirements for the identified line.

## Safety and Authorization

Work was authorized under the permit QSCP-WP-2026-02161. Prior to the commencement of the survey, a safety review was conducted as per the JSA LNDE-JSA-20260209-006 to mitigate risks associated with the survey area.

The technician verified that all site safety protocols were active and that the work area was secured before initiating the UT re-measurement on 6-RA-103.

## Equipment and Calibration

Thickness measurements were performed using the Olympus 38DL PLUS 2847193 and the Olympus 38DL PLUS 2901456. These instruments were verified against calibration certificates LNDE-CAL-2025-0812 and LNDE-CAL-2025-0961 respectively.

Calibration was performed using the 4-step carbon steel calibration block LNDE-CS-001. The measurement process and instrument setup were conducted in accordance with the standard ASTM E797.

## Execution and Findings

Sarah Thompson performed the UT re-measurement on the A106 Gr.B piping of 6-RA-103. The survey focused on validating the current wall thickness against the nominal thickness of 10.97 mm and the minimum allowable thickness of 4.57 mm.

The data collected during this survey will be used to determine the corrosion rate and remaining life of the line to establish the next inspection interval.
